16
17 === Event_dispatcher filter plugin
18
19 include::{include_path}/plugin_header.asciidoc[]
20
21 ==== Description
22
23 The Event_dispatcher filter works with a
  configuration json file provided by the user. The
  configuration json file allows the user to define
  filter logic like multiple pipelines. The
  Event_dispatcher filter simply dispatches event
  filter processing to the filter logic defined in
  the configuration json file.
24
25
26 Content of the config json file:
27     [ list of filter_parts ]
28
29 filter_part:
30     {
31         "type": "plugin" | "filter"
32         "event_filter_tags_to_process": list of
  event_filter_tag values, examples: ["
  event_filter_tag_1"], ["event_filter_tag_1", "
  event_filter_tag_2"]

```

```

33         "set_done_if_executed": false | true,
        default: false
34         "name": (for "plugin" type) name of the
        logstash plugin to use, examples: "csv" | "json"
        | ...
35         "options": (for "plugin" type) the
        configuration options for the filter plugin
36         "filter_parts": (for "filter" type) [ list
        of filter_parts] | path to a config json file
        containing [ list of filter_parts]
37     }
38
39 [id="plugins-{type}s-{plugin}-options"]
40 ==== Event_dispatcher Filter Configuration Options
41
42 This plugin supports the following configuration
    options plus the <<plugins-{type}s-{plugin}-common-
    options>> described later.
43
44 [cols="<,<,<",<","options="header",]
45 |=====
    =====
46 |Setting |Input type|Required
47 | <<plugins-{type}s-{plugin}-config_dir>> |<<string
    ,string>>|Yes
48 | <<plugins-{type}s-{plugin}-config_json_filename>>
    |<<string,string>>|No
49 | <<plugins-{type}s-{plugin}-event_filter_tag_field
    >> |<<string,string>>|No
50 | <<plugins-{type}s-{plugin}-
    event_filter_done_field>> |<<string,string>>|No
51 |=====
    =====
52
53 Also see <<plugins-{type}s-{plugin}-common-options
    >> for a list of options supported by all
54 filter plugins.
55
56 &nbsp;
57
58 [id="plugins-{type}s-{plugin}-config_dir"]

```

```

59 ===== `config_dir`
60
61   * Value type is <<string,string>>
62
63   File folder path where the configuration json file
   is located.
64
65   [id="plugins-{type}s-{plugin}-config_json_filename"
   ]
66 ===== `config_json_filename`
67
68   * Value type is <<string,string>>
69   * Default value is "filter.json"
70
71   Name of the configuration json file
72
73   [id="plugins-{type}s-{plugin}-
   event_filter_tag_field"]
74 ===== `event_filter_tag_field`
75
76   * Value type is <<string,string>>
77   * Default value is "event_filter_tag"
78
79   Name of event_filter_tag field, the value of this
   field can be read and/or set by each filter_part
   for correctly controlling the event's filter path.
80
81   [id="plugins-{type}s-{plugin}-
   event_filter_done_field"]
82 ===== `event_filter_done_field`
83
84   * Value type is <<string,string>>
85   * Default value is "event_filter_done"
86
87   Name of event_filter_done field, the value of this
   field is used by each filter_part to determine if
   it can stop traversing all filter_parts's "filter"
   methods.
88
